Who We Are

NexGen is a domestic designer and manufacturer of paper and plastic single use disposable packaging for the Multi-Unit Operators in The United States and Canada. We specialize in the customization and decoration of food and beverage cups and containers. We have 5 manufacturing and distribution locations with more than 500,000 square feet located in St. Louis, Missouri, and Piscataway, New Jersey.

Plastics

We are a pellet to pallet, fully integrated manufacturer that specialize in extrusion, thermoforming and automated packaging lines that are compatible with all packaging materials. We have more than 50 plastic processing machines and a broad stock container and cup offering. We design custom packages to meet our customer application needs with appropriately engineered products.

Paper

We offer a complete pre-press service for flexography printing including a design center, CAD table with plate and film making machines. We have more than 50 paper converting machines for both cups and containers. NexGen offers both folding cartons, round cups and containers with inline lamination and front and back paper printing technology on high-speed printers.

Printing

We print both plastic and paper cups and containers on high-speed equipment. We customize our programs around our customer needs and deliver small to medium size production runs to reduce inventory, increase turns and improve cash flow. Our paper printing Flexographic press can offer up to 10 colors and our plastic cup printers can offer up to 8 colors of dry-offset technology. We use earth friendly inks when possible and focus on quick turnaround orders.

Materials

Scan Me

NexGen manufactures, compounds and converts the most eco-advanced plastic and paper materials in the world. From recycled content to biodegradable features, we can create custom formulations to meet your environmental footprint needs. Our materials are certified food contact safe. We purchase materials globally and manufacture in our domestic facilities.

Market Channels

We focus on multi-unit accounts in the food packaging channel that include supermarkets, convenience stores and retail big box warehouse clubs. We also focus on the food service channel that includes limited-service restaurants, full-service restaurants and food service management firms. We private label for multi-unit distributors building brand awareness with domestic manufacturing assets to support products made in the USA.

Channel Strategy

Our fully integrated manufacturing platform creates supply chain efficiencies and mix enrichment to achieve the most cost effective and low-cost manufacturing and distribution system. We can consolidate both plastic and paper items on a single truck to reduce freight costs, warehouse and handling costs which increases cash flow and turns inventory efficiently. NexGen can source non manufactured products globally to consolidate spend and increase product mix to achieve the best possible cost model.

Certifications

NexGen facilities are SQF 9.0 packaging level 2, food grade certified. All of our materials are food grade certified and have all the responsible sourcing certifications from around the world. Our global manufacturing partners are BRCS certified.

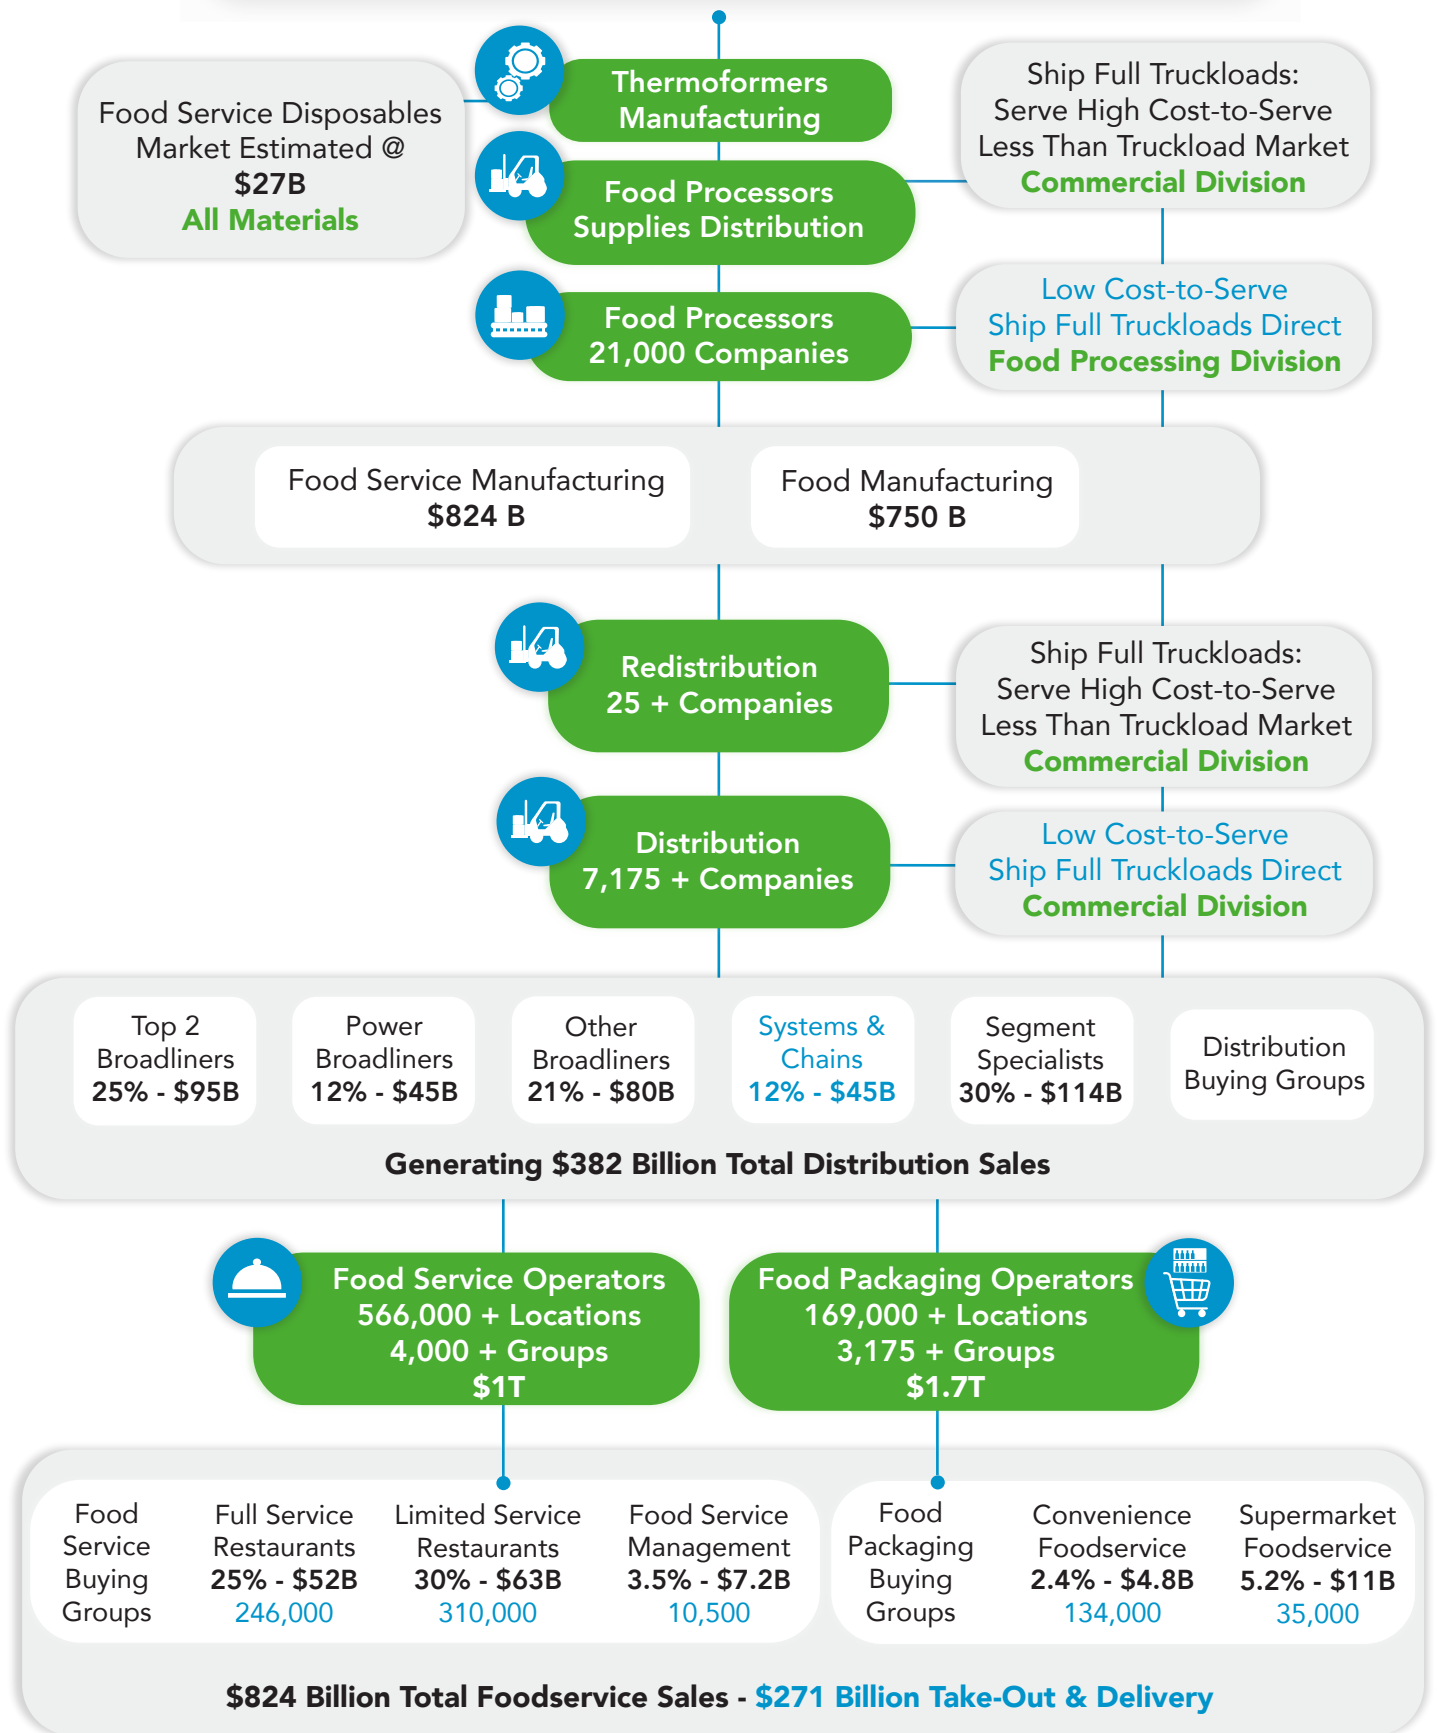

ERP

Enterprise Resource Planning - Our manufacturing platform is fully automated with min/max and production technology to ensure we always have the right product at the right time for fulfillment to your operators. Just In Time Inventory increases cash flow and reduces inventory burdens. Our forecasting system will ensure your operators receive the right product and the right time with no out of stocks.

Quick Study Guide

Please note that the views, thoughts, opinions and information contained on this report belong solely to the author. This information was collected from websites, company records and online reports available to the public.

Green Technology

The global green technology and sustainability market size was valued at US \$16.50 billion in 2023 and is projected to grow from US \$19.83 billion in 2024 to US \$83.59 billion by 2032, exhibiting an annual growth rate of 19.7% during the forecast (2024-2032). **North America accounted for a market value of US \$5.84 billion in 2023 a period to be \$6.99 billion by 2032.**

United States Biodegradable Plastics Market is expected to reach US \$2.18 Billion by 2028, with an annual growth rate of 13.68% during this period of 2022-2028.

The plastics industry is changing. Biodegradable packaging has become an integral part of the global packaging market.

The rising consumer awareness of biodegradable packaging has led to tremendous growth in the overall market. Biodegradable materials can undergo biodegradation, a chemical process during which environmental microorganisms convert materials into natural substances such as carbon dioxide, water, compost. The method of biodegradation depends on the surrounding environmental conditions.

The North America plastic recycling market size was valued at USD 2.9 billion in 2020 and is expected to expand at a compound annual growth rate (CAGR) of 13.1% from 2021 to 2028. Changing consumer behavior towards sustainability is driving the market in North America. Increasing concerns related to plastic pollution, harmful emissions from the use of petrochemicals, and fluctuating crude oil prices have been driving the demand for plastic recycling. Increasing use of recycled plastics in several industries such as textiles, automotive, packaging, and electrical and electronics, and building and construction is anticipated to boost the demand for plastic recycling in the U.S. and Canada.

Rising concerns over the use of plastics, increasing demand for alternatives to conventional plastics have been observed in the market. End-use industries in the market are shifting their focus toward the use of recycled plastics to achieve a reduced carbon footprint associated with the manufacturing process of recycled plastics as compared to virgin plastics.

A Green Technology Brand

Plastic™

- 80% & 100% Post-Consumer Recycled Material
- Organic Biodegradable Additive
- Landfill Diversion
- UpCycle – Recycle and Reuse
- 29% Annual Recycling Rate
- * Energy Savings
- * Reduce Fossil Fuels
- * Reduce Carbon Footprint
- * Less Toxic
- FDA Approved
- EFSA Approved
- Global Recycling Standards
- ISO Certified Facilities

* Compared to Virgin Petroleum Based Materials

Paper™

- 100% Plastic Free Coating
- 100% Recyclable
- 100% Home Compostable
- 100% Commercial Compostable
- 100% Marine Degradable
- 100% Biodegradable
- 100% Repulpable
- 68% Annual Recycle Rate
- Freezable, Microwaveable & Ovenable
- No Harmful Chemicals – PFAS Free
- FDA Approved
- HALAL Approved
- PEFC Responsible Sourcing

Flute™

- Sturdy light weight packaging
- Resists grease and retains heat
- Venting options
- Windowing options
- F-Flute for kraft unprinted containers
- E-Flute for kraft printed containers
- 100% recycled material
- Clean, green, and sustainable

Custom™

We can make custom designed plastic and paper cups and containers to meet your sustainability goals.

Please call for more information.

Supply Chain

NEXGEN
ECO-ADVANCED.

Global

BRGS
Packaging Materials
CERTIFICATED

International Manufacturers

A strong international strategy, or the flexibility to adopt one, it still relevant. Asia is on the rise, and Vietnam in particular is one to watch for overseas manufacturing.

Air Freight

Bypasses port congestion, meets increasing demand for instant gratification and handles urgent needs. Close management of the process balances additional costs.

Ocean Freight

Expanded ports, highly efficient megavessels and increased containerization bring new opportunities for cost savings and efficiency.

Port / Customs Clearance

Constant monitoring of regulations prevents costly international penalties.

Global Sourcing. Domestic Solutions.™

We compliment our domestic manufacturing with our global sourcing program. We can purchase all your disposables not made in the USA from BRCS certified facilities from around the world.

Global sourcing is a procurement strategy used to acquire goods or services from suppliers in other countries at the best possible price. This strategy typically seeks to exploit global efficiencies to enhance product or service delivery.

These efficiencies may encompass various economic factors, such as low-cost skilled labor, lower total cost, heightened international competition, innovative technology, and incentives, such as tax breaks and low trade tariffs.

NexGen can also access materials that are unavailable or more expensive to produce domestically.

NexGen can use five levels of global sourcing to enhance procurement.

Domestic Purchasing is sourcing goods and services from suppliers within the same country. This is the most basic level of procurement strategy, and businesses may use it for various reasons, such as reducing shipping costs or supporting local businesses.

International Sourcing is the second level and involves expanding the procurement strategy to include suppliers from different countries. This level of sourcing can provide access to emerging economies and opportunities for cost savings through the international market and suppliers.

International Procurement involves formalizing international sourcing processes and establishing relationships with suppliers in different countries. This level requires a more strategic approach to procurement, including understanding global efficiencies, developing vendor selection criteria, establishing contracts, and implementing quality control processes.

Centralized Procurement Across Global Locations aligns procurement processes between regions or business units. This level requires a high level of coordination and communication and the development of standardized procurement policies and procedures.
